http://ccR-081.mit.edu/GENSCAN.html), GeneMarkHWM (Mark Borodovsky, of GlimmerM, See Minabela Pertea, of GlimmerM, see Minabela Pertea, http://genemark.biology.gatech.edu/GeneMark/), GlimmerM (a variant http://www.tigr.org/softlab/glimmerm.html/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mperteadrigr.org/, searches of the complete sequence against a peptide database and the plant EST database at TiGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with BST similarity are named as unknown proteins. Genes without or BST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RN/Repeatmasker (Arian Smit, http.//ftp.genome.washington.edu/RN/Repeatmasker 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="8ynonym: F17K2.3; predicted by genscan" complement (join(<4414. 3616,3639. 3825,3916. 3965,4052. 4215,4552. 4712,4769. 4864,4948. 5188,5352. 5374,5506. 5585,5670. >5980))

Genes were identified by a combination of several methods: Gene prediction programs including Genscan+ (Chris Burge, http://CCR-081mit.edu/GBNSCAN.html), GeneMarkHam (Wark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant http://www.igr.org/sofilab/glimmerA httm/glimmerA.html, and GensEplicer (Wihaela Pertea.and Steven Salzbarg, contact mperteaghigr.org) searches of the complete sequence against a peptide database and the plant ESF database ar TIGR (http://www.tigr.org/tdh/tg! shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with shillarity to other proteins are named after the database hits. Genes without significant peptide similarity-but with EST similarity are named as unknown proteins. Genes without protein or EST similarity but with EST similarity are named as unknown proteins. Genes without protein prediction proteins genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl:edu/edy/RNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington-edu/RN/RepeatMasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TYSVFEFATNAWKVTDHTRFHEKPELMDDSGRVSLNGNLYMTAYNSPHTGQYFIAMLD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mRNA
                                                                                                                                                                                                                                                           CDS
GeneSplicer (Wihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity, are named as unknown proteins. Genes without protein or EST similarity. That are predicted by more than two gene prediction programs over most of their longth are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wastingdon.edu/RM/Repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/Repeatmasker.html).

It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

Specifically, the indicated order and orientation of each sequence contigh has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is believed to be correct as given however the sizes of the gaps between them are based on estimates that have

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Contact: sequence submissions@genome.wi.mit.edu

stress condition to which a plant cell has been exposed plants with increased tolerance to these abiotic stresses Identifying a and producing

Claim 144; SEQ ID NO 1034; 577pp + Sequence Listing; English,

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising:

(a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and profile of expressed polynucleotides in the plant cell deharacteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that in methods of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to betwent by the European Patent Office.

Novel Arabidopsis thalians nucleic acid useful for constructing

m

The invention relates to Arabidopsis thaliana nucleic acid sequences. The DNA sequences and the polypeptides they encode are useful for identifying homologous or related genes, for producing compositions that modulate the capression or function of the polypeptides, for mapping functional capression or function of the polypeptides, for studying associated plants of the protein, in diagnosis, for studying associated plants are capable of witheraiding aparticular disease or chart cells, in screening assays of various plant strains that are capable of witheraiding a particular disease or environmental stress, for enhancing or inhibiting production of circumstants in products in plants and the sease resistance and stress are useful for introducing or improving disease resistance and stress collected in plants, screening biologically active agents, such as plant cells and plants. Screening biologically active agents, such as functional active agents, such as biosynthetic pathways of nutritional, commercial or medicinal value. New Arabidopsis thaliana nucleic acid, for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of a protein

Claim 1; SEQ ID 615; 44pp; English.

The present invention describes an Arabidopsis thaliana nucleic acid (1) comprising a sequence capable of hybridising under stringent conditions to a sequence (51) sealected from any one of the 399 sequences given in ABL9328 to ABL94234. (1) have insecticide and fungicide activities, and identifying homologous or related genes; in producing compositions that identifying homologous or related genes; in producing compositions that modulate the expression or function of their encoded proteins, mapping functional regions of the proteins, and in studying associated physical pathways. (1) can also be used; (1), for the genetic manipulation of cells, particularly plant cells; (2) in screening assays of various plant strains to determine the strains that are best capable of withstanding a particularly plant cells; (2) in screening assays of withstanding a particularly plant cells; (2) in screening or inhibiting production of a losywitheric product in a plant; (4) as probes in mapping and in diagnosis in genetic modification and corrected to generate inboxymes or antisened coligonucleotides; and as single-stranded DNA probes or as triple-stand forming oligonucleotides; one specialization, but was obtained in electronic form at directly from the

Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA

Claim 12; 56pp + Sequence Listing; 56pp; German:

This invention describes a novel method for determining the degree of methylation of a particular cytosine in, a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is tracted chemically to convert cytosine (C) but not methylated C', to uracil, then part of the genomic DNA that contains the target C is amplified to form, a labeled amplicon. Far application to be petided nucleic action from member, of oligonucleotides and/or peptide-nucleic act (PNA) cilgomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the levino classes of oligomers, the degree of methylation is calculated The method is used: (1) for diagness and/or prognosis of side effects of the method is used: (1) for diagnesis and/or prognosis of side effects of disorders therapeutic

```
This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5-CpG-3', present in a genomic ample of DNA. The sample is tracted chemically to convert cytosine ample of DNA that occurrent the methylated C' to uracil them part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or upptied-nucleic acid (PNA) oligoners and the degree of hybridises and/or upptied-nucleic acid (PNA) oligoners and the degree of hybridised to the two classes of oligoners, from the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of the method therapeutic drugs and of a wide range of diseases; e.g. cancer, disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    f a wide range or unserged cardiovascular, gastrointestinal and respiratory or addiovascular, by by detecting mutations or single nucleotide
                 types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined similtaneously a8Q13410-ABQ54121 represent genomic DNA sequences used to illustrate themethod for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         duman; cytokine; cell proliferation; cell differentiation; growth factor;
ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemctaxis; chemckinesis; thrombolysis; oncogenesis; proliferation; metastessis; cancer; tumour; haematopoietic disorder; myeloid call disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; call culture; drug screening; gene therapy; antiniflammatory; antianthritic; heemostatic; antianthritic; heemostatic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; antianthritic; ant

contraction or chemokinetic activities, haemostatic, thrombotic or chemokinetic activities, haemostatic, thrombotic or thrombolytic activities, polypeptides and nucleotides of involved in oncogenesis, cancer cell proliferation or metastasis.

Conditions, e.g., by brotein or gene therapy: Such conditions include conditions, e.g., by protein or gene therapy: Such conditions include ancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders, inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease.

Conditions, e.g., by properides (e.g., osteoporosis), and abnormal arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, inclains and ulcers), while those with bacterial and fungal infections in addition to immune disorders.

Confort or or cell growth, For example, such polypeptides may be used to convert the can be used to augment or resplace cells damaged by illness, cantorimmune disease or accidental damage. The polypeptides and in the disapness of the above conditions, and indrug screening techniques. The present expresents a cDNA encoding a convert way also be used in the disapness of the above conditions, and in drug screening techniques. The present expresents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
have various activities, including cytokine, cell proliferation or differentiation activities, stem cell growth factor activity, haematopolesia regulators activity, tissue growth activity, immunomodulatory activity, activity, or inhibin-related activities;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hybridisation assay, genetic mapping, gene expression control, protein identification, signal transduction pathway, metabolic, pathway, promoter, termination sequence, corn, ss.

The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The metho
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA
                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect, cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.

is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          numan; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Oligonucleotide for detecting cytosine methylation SEQ ID NO 30294.
                                                                                                                                                                                                                                                                                                                      Sequence 600 BP; 136 A; 53 C; 216 G; 195 T; 0 other;

24; Length 600; 0; Indels This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-cpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonuclectides and/or peptidenucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of the repout the range of diseases, e.g. cancer, disorders

f diseases, e.g. cancer, disorder gastrointestinal and respiratory

the central nervous, cardiovascular,

systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (11) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13411. Tepresent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       99US-0139460
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           99US-0139457
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             99US-0138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -NIDI-E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of human secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are useful for treating a disease or condition associated with the expression of functional SPTM. The SPTM DNA sequences are useful for sematic or germline gene therapy to correct a genetic deficiency (e.g. severe combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellular parasites (e.g. fungal parasites and proteczoan parasites). The SPTM DNA and protein sequences are also useful for diagnosing cell proliferative disorders, cancer, immune disorders (e.g. AIDS), neurological disorders (e.g. multiple sclerosis), meningitis, abscesses, prion diseases (e.g. multiple sclerosis), meningitis, abscesses, prion diseases, cerebral palsy, neuroskeletal disorders, peripheral nervous system disorders, dermatomyositis and polymyositis, myopathy, myasthenia gravis, and mental disorders (e.g. Tourette's syndrome). CDNA sequences ABL99929 represent human secretory polymucleotides of the invention.
                                                                                                                                                       Stuart J, Lincoln SE, Altus CM, Dufour GE, Chalup MS, Hillman JL, Jones AL, Yu JY, Wright RJ, Gietzen D, Liu TF, Yap PE, Dahl CR; Momiyama MG, Bradley DL, Rohatgi SD, Harris B, Roseberry AM; Peralta CH, David MH, Panzer SR, Flores V, Daffo A; Marwaha R, Chen AJ, Chang SC, Au AP, Inman RR;

The invention comprises the amino acid and coding sequences of human secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are useful for treating a disease or condition associated with the expression of functional SPTM. The SPTM DNA acquences are useful for somatic or combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellular parasites (e.g. fungal parasites and protozoan parasites). The SPTM DNA and protein sequences are also useful for diagnosing cell proliferative disorders, cancer, immune disorders (e.g. AIDS), neurological disorders (e.g. fungal steases), motor neuron disorders, demyelinating diseases (e.g. multiple scleosis), meningitis, abscesses, prion diseases (e.g. multiple scleosis), meningitis, and polymyositis, myasithenia gravis, and mental disorders (e.g. Tourette's syndrome), cDNA sequences ABL99746 - ABL99929

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
Drosophila melanogaster expressed polynucleotide SEQ ID NO 37076.
                                                                   Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 15987 BP; 4295 A; 3570 C; 3827 G; 4295 T; 0 other;
